Overview

Creating anchors

Linking to documents

Linking within documents

Expanding link metadata

```
<a href="pluralsight.html">
```

```
    Pluralsight
```

```
</a>
```

```
<a name="TOC">
```

```
</a>
```

```
<div id="article">
```

```
</div>
```

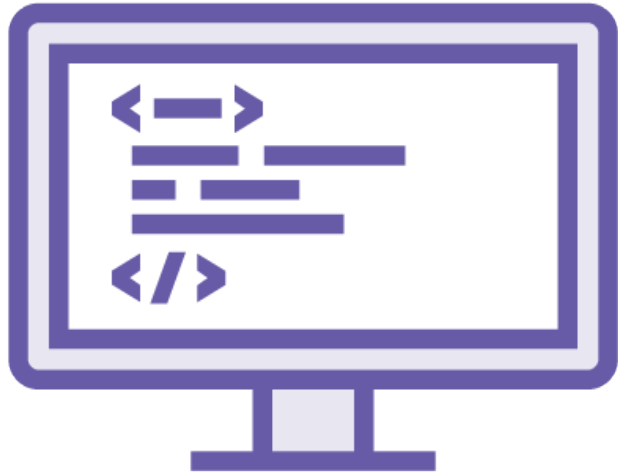

◀ Source anchor

◀ Named anchor

◀ Implicit anchor

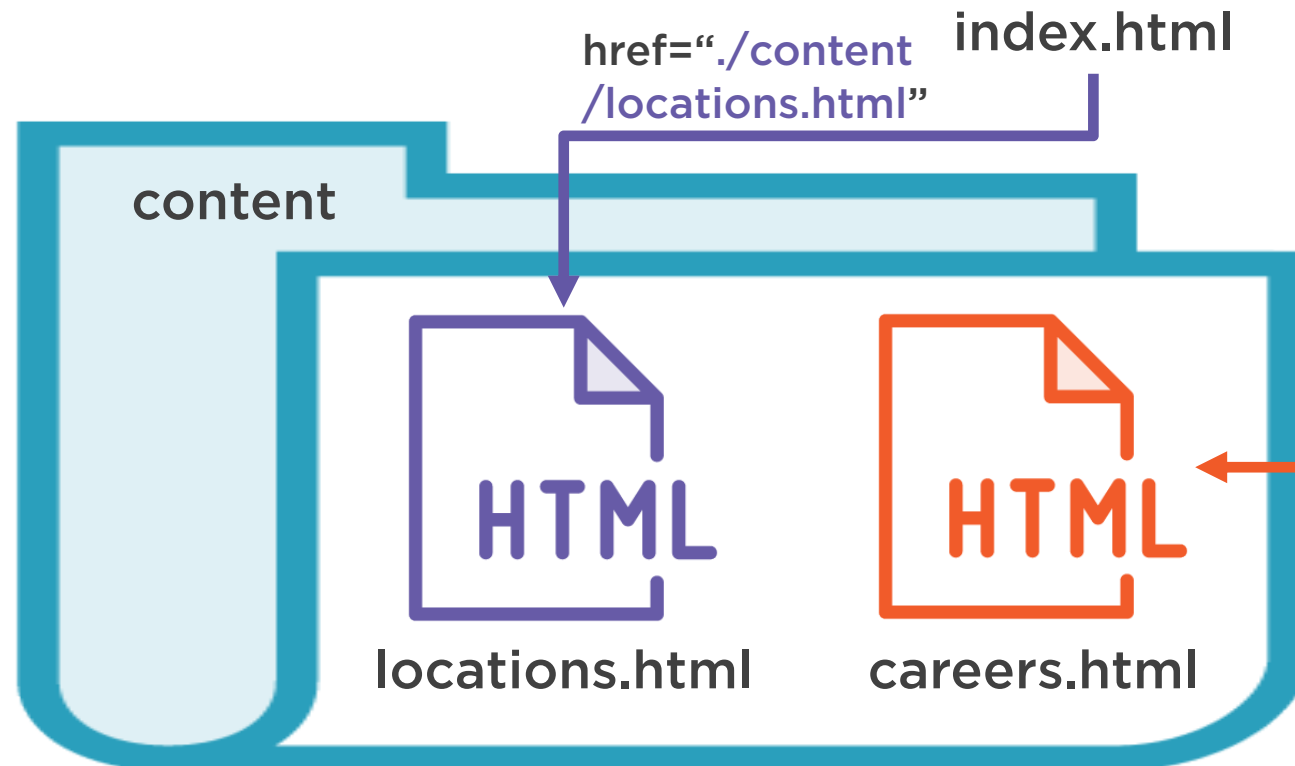

Linking to Documents

```
<a href=  
  "http://wiredbraincoffee.com/index.html"  
>Wired Brain</a>
```

href="./content
/careers.html"

```
<!DOCTYPE html>

<body>

<a href="#loc2">Location 2</a>

<div id="locations">
  <div id="loc1">First</div>
  <div id="loc2">Second</div>
</div>

</body>
```

◀ Reference local anchor

◀ Implicit anchor by ID

```
<!DOCTYPE html>
```

```
<body>
```

```
<a href="locations.html#loc2">
```

```
    Location 2
```

```
</a>
```

```
</body>
```

Summary

Anchoring allows for targeted navigation

Linking is what makes the web the “web”
